

UPS System for power regulation

Power Generation Industry

The quality of today's electrical power has become a major operating concern, especially for newer, high-tech equipment. Therefore SCHAEFER UPS-Systems are often used to provide a regulated voltage supply from an unregulated voltage source. Especially this UPS product series became important in today's power generation industry sector:

- UPS system constructed as 4U plug-in module with integrated static switch
- The UPS provides uninterrupted power to a critical load, being supplied either by mains or by batteries via the internal inverter.
- Inhibit (open-load failsafe) on static switch
- Power scaled display
- Surge power capability
- Continuous short circuit protection
- Common alarm

UPS System:
